

# YOU NEED DOWN TIME, YOUR PUMP JACK SHOULDN'T

## Ecoquip Pump Jacks

reliable ● durable ● powerful

Mounts directly and evenly on top of wellhead ensuring polished rod always pulled straight up and down.

N2 counter-balance in unit acts as your surface shock absorber for down-hole equipment and stores energy for the next up stroke.

No unreliable and unsafe proximity switches or sensor bars to control stroke length. All controls away from wellhead and enclosed on power unit.

Smooth stroke ensures almost non-existent movement and vibration of all hoses, no whip protection required.

Control system gives complete stroke control and immediate well information to operator. Adjustable timer settings, different up and down stroke speeds and alerts all easily programmed.

Engine fully enclosed with safety and the ever-changing environment in mind. Gas or electric motors available. Balanced system reduces fuel consumption and peak usage rates.

Ecoquip 9000-6X model hydraulic pump jack ● 158" stroke length/ 7-8 SPM / 35,000lbs max load ● Patented design from Calgary, Alberta
